Industry: Plastic Industry

Staff: 48 employees

Solution: Kelio Integral  
Kelio Analytics  
Kelio Protect

#### Benefits

- Control time and attendance
- Calculate job costing
- Control access
- Easy to use

#### About Bodet Limited

For 25 years, Bodet has provided innovative software and hardware solutions in three main domains of HR and time management systems:

- Time and attendance solutions
- Time recording systems
- Access control solutions

This devotion to constant improvement has enabled Bodet to become the European leader in its sector.

Container Components pioneered the introduction of plastic lids in 1984. They now manufacture over a million lids for the global waste market at plants in Los Angeles and Atlanta in the USA and in Chesterfield in the UK. In Chesterfield, the 4000sqm facility built in 2001, produces plastic lids for Western and Eastern Europe.

### The Benefits of Bodet's Solution

Container Components Europe Ltd. wanted to change its time and attendance system in 2011. "We received proposals from 5 companies. We quickly decided to work with Bodet because we were really interested in offering kiosk terminals for clocking in", explained Ian Drayton who is an accountant at Container Components.

They also wanted to know exactly who is in the building at any given time and whether employees were working the correct number of hours. In addition they also wanted to be able to analyse the profitability of their products which they now achieve by using Bodet's job costing solution.

### A Reliable and Easy to Use System

Container Components uses Bodet's touch screen terminals in the reception and in the factory. "We were immediately able to see who is in the building and gained an insight into the efficiency of our workforce. Bodet's kiosk terminal is easy to use and allows employees to clock in quickly and easily. They can also request absences and consult their clocking in information via the touch screen" explained Ian.

Overall Ian and his team at Container Components were very pleased with all aspects of the service given by Bodet. In their words they said that "it was good to work with Bodet. They knew exactly what I was trying to achieve and helped us every step of the way".
